

# Tatsam Hiring Software Engineer - Java Spring Assignment

Write an application in Spring Boot called "Priority"

## Description:

There are 4 areas that a user can allot different priorities to.

1. Connection
2. Relationships
3. Career
4. Wealth

Along with priority, he/she needs to rate the satisfaction for all the above areas on a scale of 1 to 5.

Company admin/creator should have the ability to add more areas in the backend later if needed.

## Task:

Create REST APIs that

- Returns a list of all the priority areas from the database
- Accepts the order of priority along with the satisfaction rating for each area for a user and stores it in the database

#### Instructions:

- Use standard architecture for code
- Write clean code with appropriate naming conventions.
- Add comments where necessary.

#### Submission:

- Please upload the codebase to a git host (ex: Github, Bitbucket, etc.) and share the repository url.
